ABOUT ME

AWS Certified DevOps Engineer with 4.8 years of experience in cloud infrastructure, automation, CI/CD, and container orchestration. Experienced in designing AWS environments, implementing Infrastructure as Code with Terraform and automating deployments with Jenkins, GitHub Actions, and Ansible. Focused on improving system reliability, reducing deployment time, and optimizing cloud costs.

PROFESSIONAL HIGHLIGHTS:

- 1. E-Commerce Platform Deployment on EKS (Helm + Jenkins CI/CD)**
Provisioned deployment of micro services into Kubernetes using Helm charts on Amazon EKS.
Enabled Jenkins pipelines to trigger rolling updates and manage environment-specific deployments seamlessly.
- 2. Application Health Monitoring with Prometheus & Grafana**
Enforced Prometheus for collecting real-time metrics from Kubernetes clusters and EC2 instances.
Created Grafana dashboards for visualizing performance metrics such as CPU utilization, memory usage, and request latency.
Simplified alerting rules to notify teams proactively about performance degradation or service outages.
- 3. Secure VPC Infrastructure with High Availability**
Designed a highly available VPC across multiple Availability Zones with NAT gateways.
Developed NACLs and security groups to control traffic and maintain compliance.
Enabled centralized logging and monitoring using Cloud Watch and Unified observability using Prometheus and Grafana.
- 4. CI/CD Pipeline for Multi-Environment Deployment (Jenkins)**
Established a multi-stage Jenkins pipeline with approvals, Enhanced rollbacks, and environment segregation.
Integrated SonarQube for continuous code quality analysis and testing.
Orchestrated micro services to development, staging, and production environments with zero downtime.
- 5. Infrastructure Cost Optimization and Governance**
Enabled cost monitoring through AWS Cost Explorer and executed scripts for idle resources.
Tagged AWS assets for department-level cost tracking and facilitated budget alerts.
Optimized EC2 instances and container workloads to reduce monthly operational costs.
- 6. Observability and Performance Insights with Grafana & Prometheus**
Grafana and Prometheus for lightweight, real-time observability.
Connected Kubernetes and application logs with Prometheus exporters for deeper visibility.
Composed interactive dashboards for developers and support teams to monitor trends, latency, and error rates effectively.

Core Skills:

- Cloud & Infra: AWS (EC2, S3, VPC, Lambda, ECS, EKS, and IAM).
- CI/CD & Release Management: Git Hub Actions, Jenkins.
- Monitoring & Logging: Cloud Watch, Grafana, Prometheus, ELK Stack, Cloud trail.
- Security & Compliance: IAM, KMS, Security Groups, NACLs, WAF, Secrets Manager.
- Cost Optimization: AWS Cost Explorer, Trusted Advisor.
- Networking & Connectivity: VPC, Subnets, VPNs, Load Balancers.
- Collaboration Tools: Jira, Confluence.
- Automation & IaC: Terraform.
- Scripting language: Shell Script.
- Containers & Orchestration: Kubernetes, Helm.

WORKEXPERIENCE

Tech Mahindra – Aws DevOps Engineer

Oct-2021 to feb-2025

- Deployed containerized micro services on **Amazon EKS** using **Helm charts**, ensuring smooth scaling and zero-downtime updates.
- Built **CI/CD pipelines in Jenkins** for automated build, test, and deployment across dev, staging, and prod environments.
- Added **Prometheus and Grafana** for real-time monitoring and alerting, improving incident response times.
- Standardized infrastructure provisioning using Terraform & incorporated with AWS services (VPC, EC2, IAM, S3, RDS).
- Configured AWS Cloud Watch for centralized log collection and resource performance insights.
- Enhanced application reliability by setting up rolling deployments and auto-recovery for failed pods in Kubernetes.
- Enforced IAM roles, Security Groups, and NACLs to maintain a secure and compliant cloud environment.
- Reduced infrastructure costs by right-sizing EC2 instances and cleaning up unused AWS resources.
- Merged SonarQube for code quality checks and Created test stages within the CI/CD pipeline.
- Collaborated with developers and QA to streamline release cycles, cutting deployment time by over 50%
- Release Management & CI/CD: Planned end-to-end release pipelines using Jenkins, integrating automation, environment setups, testing scripts, deployments, and production monitoring.
- Automation Advisor: Partnered with development & operation teams to implement practical automation solutions, troubleshoot issues, and provide tooling best practices for faster releases.
- Cloud Infrastructure: Provisioning of AWS infrastructure using Terraform ensuring high availability, cost optimization, and compliance.
- Containerization & Orchestration: Managed deployments of 20+ micro services on EKS clusters using Docker & Helm with zero-downtime rollouts.
- Monitoring & Debugging: Used Cloud Watch, App Dynamics, and ELK stack to provide developers with real-time operational metrics, debugging information, and alerting dashboards.
- Collaboration & Delivery: Actively worked with cloud architects and engineers, ensuring project deliverables were completed within timelines.

Megna Super IT solutions- Software Engineer

June-2020 to Oct- 2021

- Monitored production applications and ensured high availability of business-critical services.
- Investigated and resolved application, server, and database-related incidents within SLA timelines.
- Analyzed application logs and system logs to identify and troubleshoot issues.
- Coordinated with development, infrastructure, and database teams for issue resolution.
- Supported production releases and maintenance activities during scheduled windows.
- Troubleshoot application connectivity, performance, and configuration issues.

EDUCATION

Bachelor's Degree

Acharya Nagarjuna University [2015-2019]

Certifications:

Aws Cloud practitioner - Amazon web services

Awards:

- Bravo Award - Tech Mahindra
Recognized for exceptional contribution, ownership, and successful delivery of critical project deliverables.
- Pat on the Back Award - Tech Mahindra
Awarded for consistent performance, proactive issue resolution, and commitment to operational excellence.
